SMARTCOURIER – EXECUTION STEPS

Step 1: Database Setup

• Start Apache and MySQL from XAMPP.
• Open phpMyAdmin (http://localhost/phpmyadmin).
• Import the SQL file:
c:\xampp\htdocs\SmartCourier\database\parcel_tracking_v2.sql
• Verify tables using **verify_database.sql** (7 tables should be created).

Step 2: Launch Application

• Open browser and go to:
http://localhost/SmartCourier/
• Ensure the homepage loads without errors.

Step 3: Login Using Test Credentials

Admin: admin@smartcourier.com / admin123
Agent: rajesh@smartcourier.com / password
User: arjun@example.com / password

Step 4: Functional Flow Test

• Login as User → Book a parcel and view it in 'My Parcels'.
• Login as Admin → Assign/Reassign parcel to an agent.
• Login as Agent → Update parcel status and warehouse location.
• Login as User → Track parcel using live map.

Step 5: Map Verification

• Open 'Track Parcel' page.
• Verify Leaflet map loads with markers and polyline.
• Confirm auto-refresh every 10 seconds.

Troubleshooting (Quick Check)

• Database error → Check MySQL service and DB name.
• Map not loading → Check internet and browser console.
• Login issue → Verify correct credentials and password type.
